Summary

Data Engineer with production experience building cloud data pipelines using AWS, Apache Spark, Python, and SQL. Working full-time at Flytics on AWS Glue workflows, PySpark transformation logic, and SQL-based data validation pipelines across enterprise source systems. Built a medallion-architecture supply chain pipeline on Databricks with Delta Lake and structured logging at each layer. Strong background in data quality, reconciliation, and end-to-end pipeline delivery. Experienced with Oracle ODI and Fusion ERP from earlier consulting work.

Education

Ahmedabad Institute of Technology BE in Information Technology Sept 2022 – May 2026

Experience

Flytics Data Consultant Jul 2026 – Present

- Building and maintaining data pipelines using AWS Glue, PySpark, and Python; responsible for end-to-end pipeline delivery from raw ingestion through transformation to validated reporting outputs.
- Writing PySpark and SparkSQL transformation logic for data migration, cleansing, and validation workflows; AWS Glue used for pipeline orchestration and scheduling across cloud source systems.
- Running SQL-based data validation checks and reconciliation across source and target systems; catching schema mismatches, null violations, and business rule failures before data reaches downstream consumers.

Flytics Data Consultant Trainee Jan 2026 – Jun 2026

- Built ETL pipelines in Oracle Data Integrator (ODI) across 3+ enterprise source systems including Oracle Fusion ERP; improved consistency in weekly data preparation workflows.
- Developed SQL and PL/SQL scripts to extract, transform, and load structured data into reporting layers consumed by business stakeholders.
- Identified and resolved data quality issues including null values, schema mismatches, and format inconsistencies before downstream consumption.

Projects

Supply Chain Data Pipeline *PySpark, Databricks, Delta Lake, SparkSQL, Data Loader, Jupyter Notebook* [GitHub](#)

- Built a medallion architecture pipeline on Databricks processing supply chain data across Bronze, Silver, and Gold layers; used Data Loader for raw file ingestion, Delta tables for versioned storage with schema enforcement and ACID guarantees.
- Implemented structured logging at each layer transition to track file processing status, row counts, and transformation errors; the Gold layer feeds final analytics dashboards built in SparkSQL.
- Wrote PySpark transformation logic for data cleansing, type casting, null handling, and business rule application across Silver layer; Jupyter Notebook used for exploratory validation at each stage before promoting to production tables.

AI-Powered ETL Migration Tool *Python, Node.js, Express.js, React.js, PostgreSQL, Anthropic API, Gemini API, OpenAI API, PySpark, SparkSQL* [GitHub](#)

- Reads SQL directly from Oracle SQL Developer session logs or uploaded .sql files and converts it into PySpark or SparkSQL; demonstrates deep understanding of how Oracle SQL patterns map to Spark equivalents including NVL, DECODE, ROWNUM, and cursor logic.
- Instruction files on GitHub define conversion rules and are fetched at runtime; users pick source type, target dialect, and preferred AI model and get production-ready Spark code in minutes.

Customer Churn Analysis *Python, Pandas, Matplotlib, Seaborn, Jupyter Notebook* [GitHub](#)

- Analyzed 7,000+ telecom records across contract type, tenure, and demographic segments; month-to-month customers churned 3x more than yearly plan holders.
- Senior citizens surfaced as a high-risk cohort at 41% churn vs. 26% overall through segment-level analysis in Jupyter Notebook.

Skills

- **Languages:** Python, SQL, PL/SQL, SparkSQL, JavaScript (ES6+), TypeScript
- **Data Engineering:** PySpark, Databricks, Delta Lake, AWS Glue, Apache Spark, ETL pipeline design, medallion architecture, data reconciliation, data quality
- **Oracle Stack:** Oracle Data Integrator (ODI), Oracle Cloud Infrastructure (OCI), Oracle Analytics Cloud (OAC), Oracle Fusion ERP (O2C), Oracle SQL Developer
- **Databases:** Oracle SQL, PostgreSQL, MongoDB, SQLite, Snowflake (learning), Delta Lake

- **AI & APIs:** Anthropic API, Gemini API, OpenAI API, LLM integration, prompt engineering, REST APIs
- **Tools:** Jupyter Notebook, Git, GitHub, dbt (learning), React.js, Node.js, Vercel, VS Code

Certifications

-
- | | | |
|---|---------------------|-------------------------------------|
| • IBM SkillBuild Summer Internship in Data Analytics | IBM (2025) | Skills: Data Analysis, Excel, SQL |
| • Google Cloud Facilitator Program | Google Cloud (2025) | Skills: Big Data, Cloud Integration |
