Summary

B.E. IT graduate with internship and full-time experience as a Data Consultant at Flytics. Comfortable working across the full analytics workflow: collecting and cleaning raw data, running SQL queries to extract insights, building dashboards in Power BI and Tableau, and presenting findings to stakeholders. Also experienced with Python, Pandas, and PySpark for data transformation and ETL pipeline work. Used to collaborating with cross-functional teams and delivering results under tight timelines.

Education

Ahmedabad Institute of Technology BE in Information Technology Sept 2022 – May 2026

Experience

Flytics Data Consultant Jul 2026 – Present

- Collecting and transforming raw data from enterprise source systems into clean, analysis-ready formats using Python, SQL, and AWS Glue; data quality checks and reconciliation are part of every pipeline before anything gets delivered.
- Building and maintaining dashboards in Power BI and Tableau for internal stakeholders across business teams; the charts need to be clear enough that a non-technical person can walk away with the right takeaway.
- Writing SQL queries to extract trends, flag anomalies, and answer ad-hoc business questions from large datasets; most requests come in without a clear spec so the job is figuring out what the question actually is before answering it.

Flytics Data Consultant Trainee Jan 2026 – Jun 2026

- Worked on data collection and ETL pipelines using Oracle Data Integrator (ODI) across 3+ enterprise systems; the output fed directly into business reports reviewed by management.
- Wrote SQL and PL/SQL scripts to clean, transform, and structure data; learned quickly that most data quality issues only surface once you start running queries on it.
- Caught and fixed data integrity issues including null values, format mismatches, and schema inconsistencies before data moved downstream.

Projects

Supply Chain Data Pipeline *PySpark, Databricks, Delta Lake, SparkSQL, Jupyter Notebook*

- Built a medallion architecture pipeline (Bronze, Silver, Gold) on Databricks; raw files ingested via Data Loader, transformed using PySpark, and loaded into Delta tables with structured logging at each stage.
- Gold layer feeds final analytics dashboards built in SparkSQL; the whole thing runs without manual steps and logs failures automatically.

Customer Churn Analysis *Python, Pandas, Matplotlib, Seaborn, Jupyter Notebook*

- Analyzed 7,000+ telecom customer records to find what drives churn; cleaned the raw dataset, ran segment-level analysis, and visualized patterns using Seaborn heatmaps and bar charts.
- Found that month-to-month customers churn 3x more than yearly plan holders and senior citizens churned at 41% vs. 26% overall, surfaced through cohort breakdowns in Jupyter Notebook.

Skills

- **Analytics & Visualization:** Power BI, Tableau, Excel, Pandas, Matplotlib, Seaborn, Jupyter Notebook
- **Languages:** Python, SQL, PL/SQL, SparkSQL, JavaScript (ES6+)
- **Data & ETL:** AWS Glue, PySpark, Databricks, Delta Lake, Oracle Data Integrator (ODI), ETL pipeline design, data cleaning, data validation
- **Databases:** Oracle SQL, PostgreSQL, MongoDB, SQLite
- **Tools:** Git, GitHub, VS Code, Oracle SQL Developer, Oracle Fusion ERP (O2C), Vercel

Certifications

- **Databricks Certified Data Analyst Associate** Databricks (2026)
- **IBM SkillBuild Summer Internship in Data Analytics** IBM (2025) Skills: Data Analysis, Excel, SQL
- **Google Cloud Facilitator Program** Google Cloud (2025) Skills: Big Data, Cloud Integration
